e-Dispense™ Solutions

Life Sciences

A wireless solution for 24/7 dispensing and tracking of life science, medical and pharmaceutical products in frozen or chilled environments

cStar offers a true on-line, real-time, end-to-end turnkey solution encompassing ISO magnetic stripe card provision, encoding equipment, vend dispensing equipment, glass front distribution advertising, wireless local or wide area networking, comprehensive e-commerce management, product and machine health and welfare management and complete back-end software routine in automated billing.

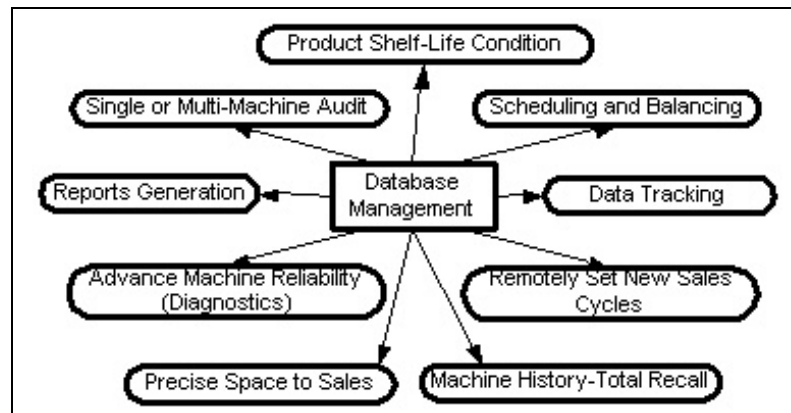

cStar's dispensing system provides remote-monitored vending apparatus for life science products such as reagents, enzymes and controlled narcotics. This wirelessly enabled dispensing system uses wide area networks and Spread Spectrum local area networking to enable controlled, 24-hour access to products via a secure and paperless environment. Benefits of cStar's systems include:

- Controlled 24/7 access to products and the elimination of tedious paperwork
- Automated inventory management and accurate statistical information on product sales and total recall logs
- Alarms including temperature monitoring of the dispensing apparatus both real-time and on-line
- Inventory and dispensing information viewable on encrypted web pages
- Distribution of product information to users

cStar's dispensing system offers advanced tactile suitable to clients' varying product-packaging formats; an ideal turnkey solution to enhance marketing incentive programs while eliminating stock-outs.
